

CRM Analyst Case Study - CDKeys

- 1) You've been provided with a transactional dataset containing customer purchase history. Using this data, build a Recency, Frequency, and Monetary (RFM) model. Clearly outline the steps you would follow to build this model, including how you would define and segment customers based on each RFM component. Additionally, explain how you would leverage this model to develop targeted retention strategies.
- 2) Imagine you have been tasked with creating a visually appealing newsletter banner for our weekly 'Bestselling Games' newsletter, targeted towards gamers on PC. Using a graphic design tool (such as Canva or Adobe Photoshop), design a banner that captures attention, and clearly communicates the theme of bestselling games. Explain your design choices. Additionally, briefly describe how your design would help drive customer engagement and newsletter open rates.
- 3) Below is an example of a newsletter we've sent recently. It has performed poorly across all major KPIs surprisingly. Carefully review the newsletter and identify the key issues. Describe your approach to correcting these problems, clearly stating what changes you would make, why you'd make them, and how these adjustments will improve customer engagement, conversions, and overall performance.
